

Allow smo.shero.us on the Google Maps key

The ordering page draws its map with the **browser key**. Google only answers for the websites listed on that key, so the new address must be added. About 5 minutes.

Item	Details
Website to add	https://smo.shero.us/ *
Key to change	The browser key (the one used for the Maps JavaScript API)
Who can do it	Anyone with Editor access to Shero's Google Cloud project

1 Open the keys page

1. Go to <https://console.cloud.google.com/apis/credentials>.
2. Sign in with the Google account that owns the Shero Maps keys.
3. In the project picker at the top, choose the Shero project.

2 Open the browser key

1. Under **API Keys**, click the key used for the **Maps JavaScript API**. It usually already lists websites under **Application restrictions**.
2. To be sure, compare it with **Google Maps browser key** in the bot admin: <https://smo.shero.us/admin/> → **Settings**. The last few characters match.

3 Add the website

1. Under **Application restrictions**, make sure **Websites** is selected.
2. Under **Website restrictions**, click **ADD**.
3. Type the address in the grey box below and click **DONE**.
4. Old test addresses (**loca.lt**, **serveusercontent.com**) can be deleted with the bin icon. They are no longer used.

```
https://smo.shero.us/*
```

4 Check the API list and save

1. Under **API restrictions**, keep **Restrict key**, with **Maps JavaScript API** ticked.
2. Click **SAVE** at the bottom. Google takes up to **5 minutes** to apply it.

5 Check it works

1. Send **hi** to the Shero WhatsApp number and open the ordering link it sends.
2. On the address step the Google map with satellite view should appear, with no grey "This page can't load Google Maps correctly" box.

Server key

The other key, **GOOGLE_MAPS_API_KEY** (Geocoding API), is used by the server, not the browser. Change it only if it is restricted by **IP address**: then add the server's IP, **54.89.20.13** (or its Elastic IP if one is attached), under **Application restrictions** → **IP addresses**.
