

Hosting the Shero WhatsApp bot on AWS

You receive

Item	Details
Code	https://github.com/NagiPragalathan/food_ordering_bot_shero.git
.env	Settings file with all keys
shero-data.zip	Database file and dish photos
Domain	For example order.sherohomefood.com (DOMAIN below)

1 Create the server

Region **us-east-1**. EC2 → **Launch instances**:

Setting on the AWS screen	Choose or type
Image	Ubuntu Server 24.04 LTS
Instance type	t3.small
Storage	30 GiB gp3
Security group	SSH 22 from My IP; HTTP 80 and HTTPS 443 from Anywhere

Allocate an **Elastic IP** and associate it with the server.

2 Point the domain at the server

DNS: **A** record, name **DOMAIN**, value **the Elastic IP**.

3 Install Docker

```
ssh -i your-key.pem ubuntu@ELASTIC_IP
sudo apt-get update && sudo apt-get install -y unzip git
curl -fsSL https://get.docker.com | sudo sh
sudo usermod -aG docker ubuntu
exit
```

4 Copy the code and files

```
ssh -i your-key.pem ubuntu@ELASTIC_IP
git clone https://github.com/NagiPragalathan/food_ordering_bot_shero.git shero-bot
exit

# from your computer:
scp -i your-key.pem .env ubuntu@ELASTIC_IP:~/shero-bot/.env
scp -i your-key.pem shero-data.zip ubuntu@ELASTIC_IP:~/

# on the server:
ssh -i your-key.pem ubuntu@ELASTIC_IP
mkdir -p ~/shero-bot/data
unzip ~/shero-data.zip -d ~/shero-bot/data
sudo chown -R 10001:10001 ~/shero-bot/data
```

5 Edit the settings file

nano ~/shero-bot/.env and set these lines (use your DOMAIN):

```
APP_ENV=production
DOMAIN=order.sherohomefood.com
PUBLIC_BASE_URL=https://order.sherohomefood.com
PAY_REDIRECT_BASE_URL=https://order.sherohomefood.com/pay
DATABASE_URL=sqlite+aiosqlite:///app/data/shero.db
```

6 Start the bot

```
cd ~/shero-bot
docker compose -f deploy/docker-compose.prod.yml --env-file .env up -d --build
```

7 Check and send the link

```
curl https://DOMAIN/health
# {"status":"ok","environment":"production"}
```

Send **https://DOMAIN** to the Shero team.

Run only **one** copy of the bot.
